

**A** Clone RAG-2 and TdT cDNAs into shuttle vector

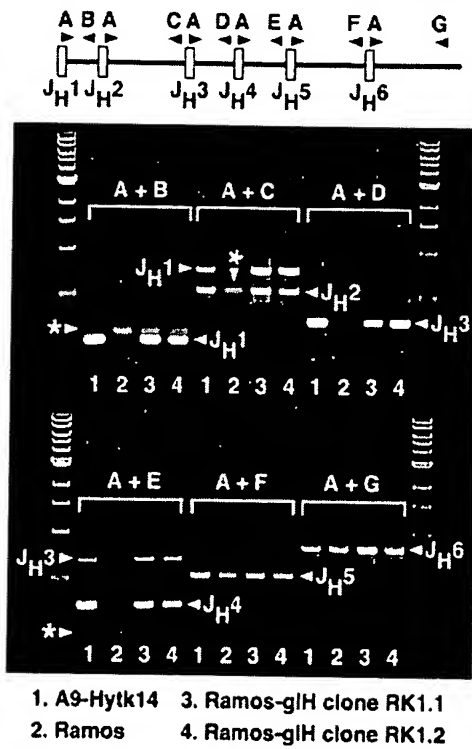

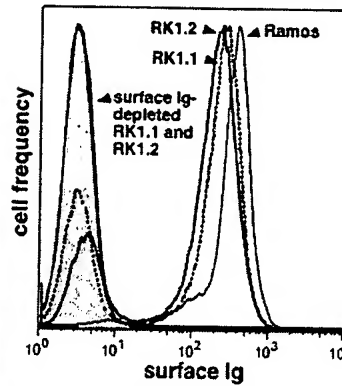

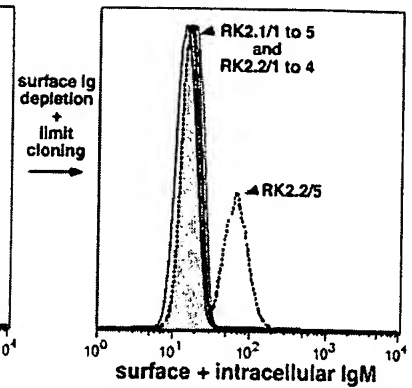

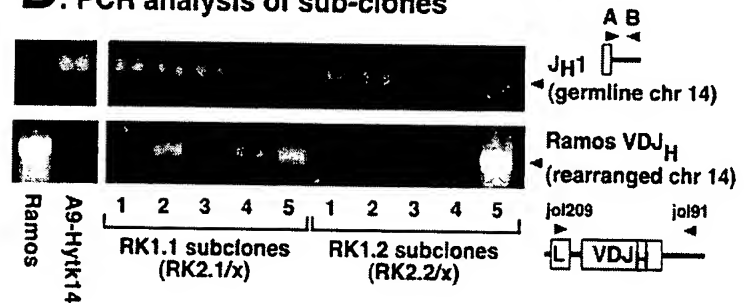

**D** Transfect HK-293T cells

HK-293T cells produce Adenovirus particles that express RAG2 or TdT

**E** co-infect Ig gene-reverted Ramos cell lines with RAG2- and TdT-Adenovirus particles

Transient V(D)J Recombination

**FIGURE 2**

**A. PCR detection of JH elements****B. surface Ig expression****C. total IgM expression****D. PCR analysis of sub-clones****FIGURE 3**
